

GEODESY, SPATIAL INFORMATICS

Hydro-geological Engineering and Earth Science Engineering MSc Branches

2018/19th year, 1st term

SUBJECT COMMUNICATION DOSSIER

**University of Miskolc
Faculty of Earth Science and Engineering
Institute of Geophysics and Geoinformatics**

Course Title: Geodesy, spatial informatics	Code: MFGGT710002																						
Instructor: Dr Gábor Bartha professor emeritus	Responsible department/institute: Institute of Geophysics and Geoinformatics																						
	Type of course: Compulsory																						
Position in curriculum (which semester): 1	Pre-requisites (if any): -																						
No. of contact hours per week (lecture + seminar): 2+1	Type of Assessment (examination/ practical mark / other): exam																						
Credits: 4	Course: full time																						
<p>Course description: The students will acquire the principles of modern geomatics, its measuring methods and the application of IT in the subject. They will be prepared to apply the modern measuring techniques, the remote data-acquiring methods and use them to solve practical problems. They will learn the application fields of geo-informatics and GIS programs. The students will be competent in the application of modern geodetic technology and geo-informatics in their field. The students enable to process their professional data and organize them into geo-information databases.</p> <p>The short curriculum of the subject: Coordinate Systems in geodesy. Geometric shape and gravitational field of Earth. Projections and mapping. Hungarian projections and mapping. Modern measuring techniques in Geodesy: Photogrammetry, Remote Sensing, GPS, Inertial Measurements, SAR technology for promoting surveying tasks in the related special fields. Geo-objects and geo-models. Raster and vector models. Data-storing techniques. Database-modelling in geo-informatics. Thematical data and their storage problems. GIS packages. Digitalization, analytical problems, knowledge based systems in GIS environment. Practical work: self-made solutions of simple case-study problems. Competencies to evolve: Knowledge: T7 Ability: K2 Attitude: A2 Autonomy and responsibility: F6</p>																							
<p>Assessment and grading: Students will be assessed with using the following elements.</p> <table> <tr> <td>Attendance</td> <td>15 %</td> </tr> <tr> <td>Short quizzes</td> <td>10 %</td> </tr> <tr> <td>Midterm exam</td> <td>40 %</td> </tr> <tr> <td>Final exam</td> <td>35 %</td> </tr> <tr> <td>Total</td> <td>100%</td> </tr> </table> <p>Grading scale:</p> <table> <tr> <td>% value</td> <td>Grade</td> </tr> <tr> <td>85 -100%</td> <td>5 (excellent)</td> </tr> <tr> <td>70 – 84%</td> <td>4 (good)</td> </tr> <tr> <td>55 - 69%</td> <td>3 satisfactory)</td> </tr> <tr> <td>40 - 54%</td> <td>2 (pass)</td> </tr> <tr> <td>0 - 39%</td> <td>1 (failed)</td> </tr> </table>		Attendance	15 %	Short quizzes	10 %	Midterm exam	40 %	Final exam	35 %	Total	100%	% value	Grade	85 -100%	5 (excellent)	70 – 84%	4 (good)	55 - 69%	3 satisfactory)	40 - 54%	2 (pass)	0 - 39%	1 (failed)
Attendance	15 %																						
Short quizzes	10 %																						
Midterm exam	40 %																						
Final exam	35 %																						
Total	100%																						
% value	Grade																						
85 -100%	5 (excellent)																						
70 – 84%	4 (good)																						
55 - 69%	3 satisfactory)																						
40 - 54%	2 (pass)																						
0 - 39%	1 (failed)																						
Compulsory or recommended literature resources:																							

- Quest: Geodesy Tutorial;
- Vanicek, P.: Geodesy;
- Burkard, R. K.: Geodesy for the Layman;
- Gábor Bartha: Geoinformation Master Course. University of Miskolc, 2014.
- István Havasi - Gábor Bartha: Introduction to GIS, Introduction to Geoinformatics (pp. 10.5) (Gábor Bartha), Satellite Global Positioning Systems (pp. 67) (István Havasi). angol nyelvű digitális tankönyv: <http://digitalisegyetem.uni-miskolc.hu>, Miskolci Egyetem. TÁMOP 4.1.2.-08/1/A-2009-0033 projekt, 2011;
- Short, N.: The Remote Sensing Tutorial.

Subject schedule

Week	Lecture and Seminar
1	Giving information about the subject requirements and special literature. Terminology and target of Geodesy and GIS, and their connections with other sciences. Formation and development of Geodesy and GIS.
2	Elements of Spatial Information: object, levels, background, geo-object, geo-model spatial information system
3	Elements of Geodesy: surfaces of Earth, Coordinate systems, Reference ellipsoids, projections (UTM, EOVS, Gauss)
4	<u>Information basics</u> : communication system, bit, Shannon theory, Neumann machine, hardware and software, computer networking (OSI model, Internet, TCP-IP)
5	<u>Digital image techniques</u> : vector and raster models, image processing, data acquiring.
6	Database types, relation databases
7	Concept of Artificial Intelligence, Expert Systems, Direct and Indirect systems
8	GIS web systems
9	Connecting GPS - GIS: navigation systems
10	Having knowledge of GRASS and QGIS programmes. Installation of programmes and basic data sets for the students' computers.
11	Reviewing and practising the operations performed with GRASS and QGIS.
12	Reviewing and practising the operations performed with GRASS and QGIS.
13	Solving the required GIS tasks in small groups.
14	Evaluation of the students' practical work.

Sample task for the term

Practical task for the 1st semester of the 2018/2019 year

Geodesy, Spatial Informatics (Hydro-geological Engineering MSC)

Open the project "contours" and the "PERMAMENT" map set in the GRASS GIS.

From the "contours" vector file, create the raster topographical map of the area with conversion and interpolation. Save the created map.

On the following tasks use the „Spearfish60” project location. Make an aspect file called „elevation-aspect” from the „elevation.10m”, then display that raster file as a base layer. After that place on it the „geology” raster layer with 30% opacity. Save this as an image file.

Draw the raster file called „soils”, and divide it into four pieces by dividing the borders into halves, and choose the northwest region. Save the picture from the northwest part. The numbers of the rows and columns should be equal to the original ones, this way we get twice better resolution.

In the report please document the way of the solution (briefly), furthermore need to refer to the names and content of the files.

Please send the project-, and shape files and the report as a word document or a pdf file to the gbmszm@uni-miskolc.hu-mail address, or deliver at the consultation time, or in person.

Please deliver the printed version of the report to the A4/31 (GEODATA) room or to the administration.

Deadline: 23. 11. 2018.

Material of the oral exam (exam questions)

1. Elements of Spatial Information.
2. Coordinate systems and projections.
3. Information basics: Communication systems, bit, Shannon theory, Neumann machine.
4. Hardware structure and software types.
5. Vector and raster image-models.
6. Elements and structure of Relation Data Bases.
7. Concept, structure and types of Expert Systems.
8. WebGIS and navigation systems.
